

Pit Droid LED Eye Upgrade

JHighlandMade.com

Power In: 5V USB-A power

On/Off Switch: located on the cord and remote controller

Remote: Control the brightness and color of the eye

Install:

Step 1: Remove the front eye cover

Step 2: Remove the original inner eye parts

Step 3: Insert the J Highland replacement eye, cord first into the eye socket, running the power cord into the head cavity

Step 4: Add USB-A power. A battery bank for cell phones works great

Step 5: Test the remote - change the colors, turn the eye on and off

Step 6: Use the alcohol wipe to gently wipe the inside of the chrome lens to remove the shiny areas. Leave some left for a distressed look

Step 7: Insert the lens into the housing and replace the retaining ring. It should pressure fit into place
